SUMMARY

Full-stack Developer with 4+ years of experience building production web applications, the last two in healthcare SaaS. I have a strong front-end background in React and TypeScript and hands-on backend experience with .NET, SQL Server and Azure. I'm a core contributor to two multi-tenant products used by clinics: a cloud PACS with a DICOM viewer and radiology reporting, and a clinic ERP with electronic invoicing. I own features from the database to the UI, with a focus on performance.

EXPERIENCE

Full-stack Developer, Evodicom

Jun 2024 – Present

Healthcare SaaS · Remote (Zapopan, Mexico) · 650+ commits across 5 frontend and backend repositories

Evotally: multi-tenant ERP for medical and diagnostic-imaging clinics

- Main author of the React 19 + TypeScript frontend since the first release. I build features end to end in the .NET 10 API (Clean Architecture, CQRS with MediatR, EF Core, SQL Server).
- Built the daily cash-closing and certification flow, Mexican e-invoicing (CFDI) screens and billing reports, quotes, appointments and medical orders.
- Built an in-app AI assistant chat, including a secure backend proxy to an Azure AI Foundry agent.
- Main author of the public patient portal for medical orders (React 19, Vite, TanStack Router/Query, Cloudflare Turnstile, email and WhatsApp sharing).
- Improved performance and usability: endpoint caching for the daily reports, standardized GET endpoints, and responsive tables and filters for mobile.

Evodicom: cloud PACS and radiology reporting platform

- Extended the company's OHIF-based DICOM viewer: a mobile version, 3D/MPR fixes, window/level presets, a measurements table, and optimizations to image preloading and memory use.
- Modernized the web app: migrated it from Create React App to Vite, upgraded MUI, and moved the Word-like report editor to RoosterJS v9.
- Built digital signatures and QR codes on reports, double reading per modality, and study sharing by email, WhatsApp and QR.
- Built features in the .NET API: new study download flow, study branch editing, notifications and referrer group permissions.

Front-end Developer, MContigo

Jun 2022 – Jun 2024

Digital health media · Remote (Salamanca, Spain)

- Worked on Next.js sites with millions of daily visits, published in 10+ languages (Mejor con Salud, Step To Health).
- Proposed and implemented On-Demand Static Revalidation, which significantly reduced server costs.
- Improved Core Web Vitals, and built new UI designs and Amazon affiliate components.
- Migrated Travel Plannet from React to Next.js 13, including its Docker setup and deployment pipeline.
- Built internal tools and reusable component structures that are easier to scale and maintain.
- From Oct 2023, continued as a contractor delivering specific features.

Freelance Web Developer

Sep 2021 – Jul 2022

Buenos Aires, Argentina

- Built and maintained Reventando Otros Mundos, a full-stack Next.js + TypeScript app for a Twitch radio show.

TECHNICAL SKILLS

Frontend	React 19, TypeScript, JavaScript, Next.js, Vite, MUI, TanStack Query & Router, Redux, Zod, Formik, i18next, Recharts, Tailwind CSS
Backend	C#, .NET 10 / ASP.NET Core, Entity Framework Core, SQL Server, MediatR (CQRS), FluentValidation, SignalR, Node.js
Cloud & DevOps	Azure (App Service, Static Web Apps, Blob Storage, Service Bus, Key Vault, AD B2C / MSAL, AI Foundry), Docker, Azure DevOps Pipelines, Git, GitHub
Healthcare	DICOM, PACS, OHIF Viewer, DICOMweb, Modality Worklist, Mexican e-invoicing (CFDI)
Quality	Vitest, Testing Library, xUnit, ESLint, Prettier, Husky, SonarQube
Languages	Spanish (Native), English (Advanced)
